NOTICE INFORMING THE APPLICANT OF THE COMMUNICATION OF THE INTERNATIONAL APPLICATION TO THE DESIGNATED OFFICES

APPLICATION TO THE DESIGNATED OFFICES

(F) Rule 47.1(c), first sentence)

Date of mailing (Jay/month/year)
14 Septumber 2000 (14.09.00)

Applicant's or signet's file reference

Case 00(152.2

PCT/EP 0/01850

International (% g date (day/month/year) 03 Ma.cn (000 (03.03.00)

Priority date (day/mond/year) 05 March 1999 (05.03.99)

Applicant

GREENOVATION PFLANZENBIOTECHNOLOGIE GMBH et al

 Notice is hereby given that the international Bureau has communicated, as provided in Article 20, the international application to the following designated Offices on the date indicated above as the date of mailing of this Notice: AU,KR,US

In according to with Rule 47.1(c), third sentence, those Offices will accept the present Notice as conclusive evidence that the communication of the international application has duly taken place on the date of mailing indicated above and no of the international application is required to be furnished by the applicant to the designated Office(s).

2. The following designated Offices have waived the requirement for such a communication at this time:

AE,AU,AM,AP,AT,AZ,BA,BB,BG,BR,BY,CA,CH,CN,CR,CU,CZ,DE,DK,DM,EA,EE,EF,MS,Fi,GB,GU,GE,GH,GM,HR,HU,ID,IL,IN,IS,JP,KE,KG,KZ,UC,LK,LR,LS,LT,LU,LV,MA,MD,MG,MK,MN,MW,MX,NO,NI,OA,PL,PT,RO,RU,SD,SE,SG,SI,SK,Si,,YJ,TM,TR,TT,TZ,UA,UG,UZ,VN,YU,ZA,ZW.

The communication will be made to those Offices only up in their request. Furthermore, those Offices do not require the applicant to furnish a copy of the international application (Rule 49.1 (a-bis)).

3. Enclosed with this Notice is a copy of the international application as published by the International Bureau on 14 September 2000 (14.09.00) under No. WO 00/53768

REMINDER REGARDING CHAPTER II (Article 31(2)(a) and Rule 54-2)

If the applicant wishes to postpone entry into the national phase until 30 months (or later in some Offices) from the priority date, a demand for international preliminary examination must be filled with the competent International Proliminary Examining Authority before the expiration of 19 months from the priority date.

It is the applicant's sole responsibility to monitor the 19-month time limit.

Note that only an applicant who is a national or resident of a PCT Contracting State which is bound by Chapter II has the right to file a demand for international preliminary executive ion.

REMINDER REGARDING ENTRY INTO THE OWNIONAL PHASE (Article 22 or 39(1))

If the apt licant wishes to proceed with the international "polication in the national phase, he must, within 2 I months or 30 months, or later in some Offices, perform the acts internal to therein before each designated or elected Office.

For further important information on the time limits and acts to be performed for entering the national phase, see the Annex to Form PCT/IB/S01 (Notification of Receipt of Record Copy) and Volume II of the PCT Applicant's Guide.

The International Bureau of WIPO 34, chemin des Colombettes 1211 Geneva 20. Switzerland

No: Claims 1-18

Industrial applicability (IA) Yes: Claims 1-18

No: Claims

2. Citations and explanations see separate sheet

VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made: see separate sheet

R It m I

Basis of th r port

The specification provides support for the amended set of claims as far as referring to two enzymes being plant or fungi phytoene synthase and fungi or bacteria phytoene desaturase (p. 8, In. 25-28). The amended claims, however, are not supported as far as referring to the specific combination of phytoene synthase with phytoene desaturase and Z-carotene desaturase. Thus, this combination of enzymes which is described in amended claims 1, 2 and 14 goes beyond the disclosure as filed and has, therefore, been disregarded while establishing this report (Rule 70.2(c) PCT).

Re Item V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

D1: WO 99 07867 A (CALGENE LLC) 18 February 1999 (1999-02-18)

D2: BURKHARDT ET AL: 'Transgenic rice (Oryza sativa) endosperm expressing daffodil (Narcissus pseudonarcissus) phytoene synthase accumulates phytoene, a key intermediate of provitamin A biosynthesis' PLANT JOURNAL, GB, BLACKWELL SCIENTIFIC PUBLICATIONS, OXFORD, vol. 11, no. 5, 1997, pages 1071-1078, XP002087151 ISSN: 0960-7412 cited in the application

Art. 33(3) PCT, Inventive Step

- 1. D1 is the closest prior art document for the present application. Said document (p. 28, In. 21-p. 29, In. 19) discloses plasmids which contain a napin expression cassette for the bacterial phytoene desaturase fused to the transit peptide sequence of the pea Rubisco small subunit and bacterial phytoene synthase. The napin expression cassette contains a promoter preferentially expressed in plant seed tissue (p. 50, ln. 1-4). Said plasmids represent binary vectors for Agrobacterium-mediated transformation. The plasmids were used for the production of transgenic Brassica napus plants (p. 32, In. 7-9 p. 41, ln. 31 - p. 44, ln. 2). The seeds of these transgenic plants show increased carotenoid levels.
- 1.2. The difference between claims 1-13 and D1 is the use of a phytoene synthase derived from plant or fungi instead of bacteria. The use of such phytoene synthases would.

EXAMINATION REPORT - SEPARATE SHEET

however, be obvious for the skilled person because such enzymes are known and used for plant transformation (see e.g. p. 4, ln. 2-3 of the specification and p. 5, ln. 8-10 of D1). Also the use of hygromycin phosphotransferase as a marker gene is obvious because such a marker gene is used for plant transformation in the prior art (see D2, p. 1072, right column, paragraph 2). Claims 1-13 and 17 are, therefore, not inventive.

2. The wording of claim 1 embraces DNA molecules which also comprise a phytoene synthase and a phytoene desaturase in addition to ζ-carotene desaturase and lycopene cyclase. Such DNA molecules are, however, obvious in the light of D2: said document discloses the production of transformed rice endosperm with a vector which expresses daffodil phytoene synthase (p. 1072, right column, paragraph 2). D2 further refers to experiments to transform rice plants with the remaining enzymes needed to produce βcarotene in rice endosperm (p. 1075, right column, last paragraph). In view of the obvious need for such plants (see introduction of D2) the skilled person would follow the teaching of D2 and produce a DNA molecule as embraced in claim 1 and use it for methods as embraced in claims 14-18. Claims 1 and 14-18 are because of this reason not inventive.

Re Item VIII

Certain observations on the international application

Art. 6 PCT, Lack of Clarity, Lack of Conciseness

- Claim 8 refers to "said plastid transit peptide sequence" of the DNA molecule of claim 1.
- 7. Claim 7, however, does not describe a plastid transit peptide sequence.
- 2. Claim 14 describes transformation with plasmids or vector systems according to claim 9 or 10 or with plasmids or vector systems carrying genes or cDNAs coding for phytoene synthase desaturase. The systems according to claim 9 or 10, however, already carry genes or cDNAs coding for phytoene synthase desaturase. Thus claim 14 unduly repeats the same subject matter and is, therefore, not concise.
- 3. According to the teaching of claim 17, Brassica seeds are carotenoid free. D1, however, shows that said seeds contain carotenoids. Thus, claim 17 is inherently inconsistent and, therefore, not clear.

Claims:

- 1. An isolated DNA molecule comprising a nucleotide sequence providing one or more expression cassettes capable of directing production of two or three enzymes specific for the carotenoid biosynthesis pathway being:
 - phytoene synthase derived from plants or fungi, and
 - phytoene desaturase derived from fungi or bacteria, or
 - phytoene desaturase and ζ-carotene desaturase derived from plants.
- 2. The DNA molecule according to claim 1, wherein said expression cassette comprises genes or cDNAs coding for plant or fungi phytoene synthase, for fungi or bacterial phytoene desaturase or for plant phytoene desaturase and ζ-carotene desaturase, each operably linked to a suitable constitutive, inducible or tissue-specific promoter allowing its expression in plant cells, seeds, tissues or whole plants.
- 3. The DNA molecule according to claim 1 or 2, further comprising at least one selectable marker gene or cDNA operably linked to a constitutive, inducible or tissue-specific promoter sequence allowing its expression in plant cells, seeds, tissues or whole plants.
- 4. The DNA molecule according to any of claims 1 to 3, wherein the nucleotide sequence coding for phytoene synthase originates from plants, preferably expressed under the control of a tissue-specific promoter.
- 5. The DNA molecule according to any of claims 1 to 4, wherein the nucleotide sequence coding for phytoene desaturase originates from bacteria.
- 6. The DNA molecule according to any of claims 1 to 5, wherein the nucleotide sequence coding for phytoene desaturase is fused with a suitable plastid transit peptide encoding sequence, both of which preferably are expressed under the control of a tissue-specific or constitutive promoter.

- 7. The DNA molecule according to any of claims 2 to 6, wherein the selectable marker gene or cDNA is regromycin phosphotransferase under the control of a constitutive promoter.
- 8. The DNA molecule according to claim 6 or 7, wherein said plastid transit peptide sequence is derived from the pea Rubisco small subunit (tp).
- 9. A plasmid or vector system comprising the DNA molecules according to any of claims 1 to 8.
- 10. A plasmid or vector system according to claim 9, which is derived from Agrobacterium tumefaciens.
- 11. A transgenic plant cell, seed, tissue or whole plant that contains a DNA molecule according to any of claims 1 to 8.
- 12. A transgenic plant cell, seed, tissue or whole plant according to claim 11, selected from the group consisting of eukaryotic alga, embryophytes comprising *Bryophyta*, *Pteridophyta* and Spermatophyta such as *Gymnospermae* and *Angiospermae*, the latter including *Magnoliopsida*, *Rosopsida*, and *Liliopsida* ("monocots").
- 13. A transgenic plant cell, seed, tissue or whole plant according to claim 12, selected from the group consisting of grain seeds, with rice, wheat, barley, oats, amaranth, flax, triticale, rye, and com being preferred; oil seeds, with Brassica seeds, cotton seeds, soybean, safflower, sunflower, coconut, and palm being preferred; other edible seeds or seeds with edible parts selected from the group consisting of pumpkin, squash, sesame, poppy, grape, mung beans, peanut, peas, beans, radish, alfalfa, cocoa, coffee, hemp; tree nuts, with walnuts, almonds, pecans, and chick-peas being preferred; potatoes, carrots, sweet potatoes, tomato, pepper, cassava, willows, oaks, elm, maples, apples, bananas; and ornamental flowers, with lilies, orchids, sedges, roses, buttercups, petunias, phlox, violets, and sunflowers being preferred.

- A method of transforming plant cells, seeds, tissues or whole plants in order to yield transformants capable of expressing all enzymes of the carotenoid biosynthesis pathway necessary to produce carotenes and xanthophylls of interest, comprising the transformation of said plant cells, seeds, tissues or whole plants with a DNA molecule according to any of claims 1 to 8, or with a plasmid or vector system according to claim 9 or 10, or with plasmids or vector systems carrying genes or cDNAs coding for plant or fungi phytoene synthase and for fungi or bacterial phytoene desaturase, or with plasmids or vector systems carrying genes or cDNAs coding for plant or fungi phytoene synthase, for plant phytoene desaturase and for plant ζ-carotene desaturase, wherein said host plant cells, seeds or tissues selected for transformation normally are carotenoid-free.
- 15. A method according to claim 14, wherein said host plant cells, seeds or tissues selected for transformation normally have a carotenoid content of 0.001 % w/w or lower.
- 16. A transformed whole plant regenerated from transformants yielded according to claim 14 or 15, or parts thereof, selected from the group consisting of eukaryotic alga, embryophytes comprising *Bryophyta*, *Pteridophyta* and Spermatophyta such as *Gymnospermae* and *Angiospermae*, the latter including *Magnoliopsida*, *Rosopsida*, and *Liliopsida* ("monocots").
- 17. A transformed whole plant or part thereof according to claim 16, selected from the group consisting of grain seeds, with rice, wheat, barley, oats, amaranth, flax, triticale, rye, and com being preferred; oil seeds, with Brassica seeds, cotton seeds, soybean, safflower, sunflower, coconut, and palm being preferred; other edible seeds or seeds with edible parts selected from the group consisting of pumpkin, squash, sesame, poppy, grape, mung beans, peanut, peas, beans, radish, alfalfa, cocoa, coffee, hemp; tree nuts, with walnuts, almonds, pecans, and chick-peas being preferred; potatoes, carrots, sweet potatoes, tomato, pepper, cassava, willows, oaks, elm, maples, apples, bananas; and ornamental flowers, with lilies, orchids, sedges, roses, buttercups, petunias, phlox, violets, and sunflowers being preferred.

18. A transformed whole plant or part thereof according to claim:17 being rice.
